Edit

Create a colourful and professional mobile application wireframe for Mobile Computing Lab Experiment 5. Title: Location-Based Mobile Application. Design a mobile app screen that uses GPS and location services. Include the following:
App name: Smart Location App
A location icon and current location display
A search bar to search for nearby places
A map section showing the user's location
Nearby Places section with Hospital, Restaurant, ATM, and College
A button labelled "Get Directions"
A bottom navigation bar with Home, Map, Search, and Profile icons
Use a modern mobile phone layout, light blue and white colours, rounded buttons, clear text, and simple icons. Make the design neat, attractive, and suitable for a college Mobile Computing Lab record in Figma.

Worked for 41s

Implemented Mobile Computing Lab Experiment 5 as a polished mobile application wireframe.

Included

- "Smart Location App" branding
- Current-location display with GPS icon
- Nearby-place search bar
- Custom map showing the user's position
- Hospital, Restaurant, ATM, and College cards
- Prominent "Get Directions" button
- Home, Map, Search, and Profile navigation
- Modern phone frame with light-blue and white styling
- Rounded controls, custom line icons, and responsive presentation
- College lab-record heading and footer

Updated: `src/App.tsx`

Verification: `pnpm run build` passed successfully.
